

#### **WHO WE ARE**

We are Dental Robotics. We are developing a toothbrush that cleans your teeth in 10 seconds more effectively than you would be able to with a regular or electrical toothbrush in 2 minutes. We are changing the way the world brushes teeth.

We are growing fast: in October 2017, we were a 3-man team, today we've grown to 10 and are looking for another 10 people to strengthen our ranks. We have huge ambitions and we need you to realise them!

#### **WHAT WE OFFER**

We offer the full startup experience: immense challenges, great responsibility and intense growth – business wise but also personally. And just as important: we offer you the opportunity to work on solving a serious problem and improve the lives of millions.

#### **THE INTERNSHIP**

**We are looking for product design engineers, product designers and interaction designers!**

##### **Product Design Engineer**

- You will be developing and creating prototypes and the final product.
- Rapid prototyping and testing to get to minimum design requirements as soon as possible
- Can help with the engineering of the product
- Has affinity with CAD (Rhino, Fusion360, Solidworks)

##### **Product Designer**

- Design the optimal look and feel of the product in order to increase user acceptance
- Has affinity with visualising (hand sketching, digital sketching, adobe suite)

**Interaction Designer**

You will be testing our prototypes with users and design the product and methods to optimize user acceptance:

- Design and perform user test of product in lab setting and in practice
- Improve the User Experience of the product
- Design and test materials and methodologies to increase user acceptance

**INTERESTED?**
